# Guarantee

ALL BONNEY TOOLS are made from the finest obtainable steels to meet normal conditions to which the tool would be subjected. Each Bonney Tool is individually and rigidly inspected before leaving the factory, and is guaranteed against defects in workmanship and/or materials. Any tool that does not live up to this guarantee will be replaced or repaired free of charge.

Free replacement cannot be made if inspection shows that:—tools have been hammered or used with a device for adding extra leverage—tools have been ground thinner or changed in design—tools have been used on oversized or undersized nuts—tools have been used for any purpose other than that for which they have been designed.

Bonney Tools cannot be replaced free of charge that show normal wear and tear—damage from contact with hot wires—damage resulting from alterations or tampering—breakage from abuse or overlaod.

Bonney Pliers, Punches, Chisels or Screw Drivers cannot be replaced or repaired free of charge that show they have been used for other than their intended purpose, or that show damage to cutting edges resulting from use on hardened materials or tempered steel wire.

All Bonney Tools must be returned to the factory in Allentown, Penna., with charges prepaid, for examination before any adjustment will be made.

## You Can Usually Spot

### A Good Hunter By His Gun . . .

### A Good Mechanic By His Tools

Take the man who is a crank about his gun . . . won't settle for less than a famous "name make" . . . Winchester, Remington, Ithaca, for instance . . . and takes care of it like a baby. Ten to one he is a real hunter.

Take the man who is a crank about tools . . . wouldn't give kit-room to anything less than a Bonney Wrench. Ten to one he is a real mechanic.

"Cheap tools are for chumps", say men who know tools and how to handle them. And the highest recommendation for Bonney Wrenches and other Bonney Tools is the kind of men who use them. Among America's finest mechanics, Bonney is simply another word for "best".

Naturally, it is not to chance that Bonney Wrenches owe their reputation of being "America's finest wrenches". Bonney Tools did not "just get that way". They are made that way. Back of every Bonney Tool is 50 years of "know-how".

Bonney has always pioneered and is still pioneering in tool designing and development. In a Bonney Tool, the emphasis is on lightness, strength, precision. To obtain superb tool steels, Bonney originates its own alloys and heat treating methods.\*

It is no wonder that throughout America, seasoned mechanics say: "You can't beat a Bonney".

\*"Bonaloy" and "Zenel", special alloy steels used in the manufacture of Bonney Tools, are trademark registered in the U. S. Patent Office.

## Bonney No. CC10 Roller Cabinet

The Bonney CC10 Roller Cabinet fills the two outstanding requisites of a mechanics' storage locker,—utility value and the safe-keeping of the mechanic's tools.

Attractively finished in red "crackle" enamel, the cabinet is made of heavy gauge sheet metal. Corners are rounded to enhance its appearance and it is mounted on rubber-tired casters for noiseless, easy movement.

The platform top of the cabinet will accommodate any Bonney tool box including the largest, MB82 chest, shown on page three of this section. This cabinet makes it easy to roll a complete tool assortment about the shop and take it right to the job, easily and quickly. The No. CC10 Cabinet (replaces CC Cabinet) is 28" long, 13" deep and 27" high. It has a center shelf, double doors, and a door lock with key. Weight 50 lbs.

**BONNEY FORGE & TOOL WORKS, ALLENTOWN, PENNSYLVANIA**

## Bonney No. CC5 Roller Cabinet

The Bonney CC5 Roller Cabinet provides a medium-sized storage locker, enabling the mechanic to keep tools conveniently close to the job, yet safe under lock and key when not in use.

This cabinet has the attractive Bonney red color in "crackle" enamel finish and is made of heavy gauge sheet metal. Smartly designed with rounded corners and chromium trim, it is mounted on rubber-tired casters for noiseless, easy movement.

The platform top of the cabinet will accommodate any Bonney tool box with the exception of the largest, MB82 chest. This cabinet makes a fine workshop on wheels. It eliminates the necessity of going back and forth to the bench for needed tools.

The No. CC5 Cabinet (replaces C Cabinet) is 24" long, 12" deep and 27" high. It has a center shelf, single door, and a door lock with key. Weight 40 lbs.

### No. TS-9 Single Square Socket, 3/8" Square Drive

This socket is specifically designed to remove and install the oil chamber drain plugs in the Buick dynaflo transmission on all Buick cars so equipped. It can be used on any standard 3/8" drive attachment and has a 9/32" single square opening.

## Crow Foot Wrenches

For work on tubing fittings, especially useful for torque wrench adjustments in obtaining specified torques.

NOTE: For flare nut connections only. Not to be used on work requiring heavy pull.

## No. 4080 & No. 4080L Planetary Ratchets

1/2 INCH  
SQ. DRIVE

Patent Applied For

These new Bonney Reversible Ratchets have been developed to fill the mechanic's need for a close-quarters, positive engagement ratchet with minimum drag. They cannot shift accidentally while pulling. These ratchets are strong, well-balanced and are handsomely finished in the latest Bonney streamlined design.

The No. 4080 Ratchet is 10" long. The 4080L is 15" long.

## No. 2571 Cadillac Connecting Rod Socket

1/2" DRIVE

This is a straight walled 7/16 inch single hexagon socket with 1/2 inch drive, designed to fit the close clearance on Cadillac connecting rods in models prior to 1949. Because of thin wall, necessary to meet the requirements of this application, this tool is not guaranteed. The length of the socket is 1 3/8 inches.

## No. F18 Connecting Rod Socket for Ford V8

A special socket for adjusting Ford V8 connecting rod bearing cap nuts. It has a 9/16" hexagon opening and is equipped for 1/2" square drive.

The nose of the socket is very thin to make this adjustment easily. Made of Bonaloy Steel, chrome plated and polished. Because of the thin wall construction of this socket, it cannot be guaranteed.

## FN Series, Bonney Torque Wrenches

$\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{3}{4}$  INCH  
SQUARE DRIVES

This newly designed line of Bonney Torque Wrenches features a broad, pre-tested tension bar. Handles are pivot-mounted to maintain a constant leverage radius and calibrations are easy to read. Their long, thin design provides easy access to tight spots. Available in foot pound or inch pound calibrations as listed:

## Heavy-Duty Extra Deep Hexagon Sockets $\frac{3}{4}$ INCH SQUARE DRIVE

Chromium Plated

These are heavy-duty deep sockets designed to be used for truck U bolts and any other application where the bolt extends through the nut. Precision broached for accurate fit.

**BONNEY FORGE & TOOL WORKS, ALLENTOWN, PENNSYLVANIA**

## ZENEL Open End Wrenches

Zenel Steel from which these open end wrenches are made is the strongest, toughest wrench steel known and is found only in wrenches manufactured by Bonney.

Bonney Wrenches made of Zenel Steel, not only wear well under the most severe use, but are virtually unbreakable. In fact, they actually outlast two or three wrenches made of ordinary steels.

Full advantage has been taken of the properties found in this steel. As a result Zenel Open End Wrenches have narrower heads, permitting their use in work in "hard-to-get-at" places; handles are longer and thinner than on ordinary wrenches, providing greater leverage and reducing the weight of the wrenches themselves. The concave handle section provides a firm, comfortable grip. Drop forged, heat-treated and fully chrome plated with polished heads, Zenel Open End Wrenches are the best buy on the market in tools of this type.

## Bonaloy Open End Wrenches

Openings at 15° Angle

Drop forged of Bonaloy Steel, this line of open end wrenches has through the years become the standard of comparison for other wrenches of similar type. Heads are thin and pear-shaped providing more turning room. Openings are precision-milled, providing a firm, accurate fit to the nut or bolt head without any possibility of slippage.

## Bonney Streamlined Wrenches

Bonney leads again with a new design in wrenches—streamlined, slim, trim, light in weight and well balanced. Easier to handle, easier on the hands. Handles are rounded and smooth. No sharp edges or rough spots to make hands sore.

Wrench openings are accurate, assuring a firm hold on the nut. Narrow heads, without sacrifice of strength, permit getting into tight places.

By its looks, by its heft, by its feel, the new Bonney Wrench says to the **real** mechanic: "Here's a wrench you can depend on."

## ZENEL Tappet Wrenches

Zenel Tappet Wrenches are made of the same steel as the Zenel Open End Wrenches described on page one of this section. Drop forged, they have concave handles which are long and thin, reducing the weight of the wrench when compared to other wrenches designed for tappet adjustments. Openings are precision-milled and angled at  $15^\circ$ , with a different size opening in each end. Zenel Tappet Wrenches are perfectly balanced, carefully heat-treated, thoroughly tested and inspected. They are heavily chrome plated with heads buffed to a high permanent lustre.

## Bonaloy Tappet Wrenches

### 401 Series

Bonaloy Tappet Wrenches of the 401 Series are the proper length (eight inches), therefore allow the mechanic to work clear of the motor when it is hot. The angle of the heads also allows him to reach around into normally inaccessible locations.

Some cars require three wrenches to make complete tappet adjustments. Consequently, the 401 Series Tappet Wrenches are designed so that two may be worked like scissors with one hand while the third is used in the other hand. Both openings in this series are of the same size but are at different angles. One opening is straight, the other at  $22\frac{1}{2}^\circ$ .

Wrench No.	Openings Milled	Length	Thickness of Head
401A	$\frac{7}{16}$	8	$\frac{5}{32}$
402	$\frac{1}{2}$	8	$\frac{5}{32}$
403	$\frac{9}{16}$	8	$\frac{11}{64}$
404	$\frac{5}{8}$	8	$\frac{3}{16}$
405	$\frac{11}{16}$	8	$\frac{3}{16}$

### No. N52 Tappet Wrench Set • 8 Pieces

The No. N52 Tappet Wrench Set will handle the tappet adjustments on a large number of makes of cars and trucks. It contains two each of four sizes of the No. 401 series as follows:

Nos. 402      403      404      405

with openings as shown in the table above.

N52R is available in leatherette roll, LR48. N52 in cardboard box.

## L402 Series Tappet Wrenches - Extra Long

These extra-long, thin, tappet wrenches are especially suited for tappet adjustments on late model cars where it is necessary to make adjustments from underneath the car. Heads are extremely thin, with openings at  $22\frac{1}{2}^\circ$ . Made of Bonaloy Steel, chrome plated, with polished heads.

Wrench No.	Opening Milled	Length	Thickness of Head
L401	$\frac{3}{8}$	14	$\frac{3}{16}$

Bonaloy Miniature Wrenches

Bonaloy Open End Miniature Wrenches are ideal for adjustments on generators, radios, distributors, air cleaners, electrical parts and work where parts are small and space in which to work is limited.

They are drop forged of Bonaloy Steel, given a careful heat-treatment and heavily chrome plated with polished heads. A different size opening is milled in each end and heads are angled at 15° for efficiency. Handles are thin and concave to keep down weight.

No.	Size Openings	Length	Thickness of Head
H10	3/16 & 7/32	2 1/2	7/64
H12	1/4 & 9/32	3	5/32

Bonaloy Electrical Wrenches

Bonaloy Electrical Wrenches have a different size opening in each end with head on one end at 15° angle and the other end at 60° angle. They are drop forged of Bonaloy Steel with accurately milled openings, heat-treated their entire length and fully chrome plated with polished heads.

They are exceptionally useful for making adjustments on accessories and electrical apparatus where parts are small and space in which to work is limited.

## Bonaloy Streamlined Combination Wrenches

### Long Series, Double Hexagon or Single Hexagon

This is the new Bonney design in combination wrenches—streamlined, light in weight and well balanced. Easier to handle, easier on the hands. Handles are rounded and smooth. Box end set at 15° angle for clearance, open end angled at 15°.

Wrench openings are accurate, assuring a firm hold on the nut. Narrow heads, without sacrifice of strength, permit getting into tight places. In single or double hexagon type these new Bonney wrenches say to the **real** mechanic: "Here's a wrench you can depend on." Available in sizes listed below:

Double Hexagon No.	Hexagon No.	Opening	Length	Regular Series		Heavy Series	Light Series	Cap Screws

Same size openings both ends

This series of Bonney Box Wrenches has only one end offset and has the same size double hexagon opening in each end of the wrench.

They are drop-forged of Bonaloy Steel, carefully heat-treated, chrome plated, with polished heads. Handles are panelled, affording a firm, comfortable grip. Box walls are thin. Consequently they are light in weight and suitable for work in the "hard-to-get-at" places.

## No. N76 Set • 6 Pieces

Set contains an assortment of one each of the above wrenches. No. N76R can be had in handy, leatherette roll LR56, N76 in cardboard box.

Bonaloy Box Wrenches

Extra Small Double Offset Type

Bonaloy Extra-Small Box Wrenches are ideal for generator, carburetor, starter, electrical and ignition work where parts are small and space in which to work is limited. They are drop forged of Bonaloy Steel, heat-treated and chrome-plated with polished heads.

No. N80 Set 4 Pieces

Contains one each of the following:

No.	Size Openings	Length
E40	3/16 & 13/64 Hexagon	27/8
E42	7/32 & 15/64 Hexagon	31/8
E44	1/4 & 9/32 Double Hexagon	33/8
E46	5/16 & 11/32 Double Hexagon	33/4

No. N80R Set is packed in leatherette roll LR8, N80 in a cardboard box.

No. N92 Set 5 Pieces

The No. N92 Set is composed of five long type double offset box wrenches with the most popular openings from 3/8" to 15/16". Set is packed in a cardboard box and contains one each of the following:

No.	Size Openings	No.	Size Openings

Double Offset Type Bonaloy Box Wrenches

Short Type  
Double Hexagon Openings

Bonney Box Wrenches, drop-forged of Bonaloy Steel, are thin, long and light in weight. Different size double hexagon openings are broached in each end of the wrench. Box walls are thin but still have the exceptional strength of all Bonney Wrenches. Handles are oval, permitting a firm, comfortable grip. All wrenches are chrome plated, with heads buffed to a high, permanent lustre.

## 15° Angle Type Bonaloy Box Wrenches

Short Type & Long Type  
Single Hexagon Openings

Since a great number of mechanics prefer a wrench with single hexagon openings, Bonney now makes the most popular sizes available in the numbers listed below. Box walls are thin and handles are thin and oval shaped, providing a firm, comfortable grip. Especially useful on worn, rounded nuts.

15° Angle Type Bonaloy Box Wrenches

Short Type & Long Type  
Double Hexagon Openings

Bonaloy 15° Angle Box Wrenches are designed for work in locations with low overhead clearance. Either side of the head may be applied. Box walls are thin. Double hexagon openings are accurately and cleanly pull-broached. They are finished in rust-resisting chrome plate with polished heads.

### No. 2883 Starter Wrench for Chrysler

Designed for use on starter nuts on Chrysler cars. 9/16" & 5/8" openings, 9" long.

### No. 2565 Chevrolet Starter Wrench

Designed to service the starter assembly on 1949-50 Chevrolets. Wrench will clear solenoid on starter housing. Opening, 3/4". Overall length, 12 5/16".

### No. 2844 Olds Manifold Wrench

Designed with step-down offset of one inch at one end, 42° flat angle offset at opposite end. Opening 9/16". Length 9 1/2".

### No. 2558 Combination Wrench

Formed with 25° angle to facilitate service on Ford carburetors and distributors. Openings 1/2". Length 6".

### No. 6481 Battery Wrench

Designed especially for service work on battery terminals. Has 9/16" & 3/4" double hexagon openings. Length, 6".

### No. 1950 Wrench for Chevrolet Steering Worm Adjustments

Designed for steering worm adjustments on 1939 Chevrolet. Opening 1 9/16". Length, 12 1/2".

### No. 2626 Drain Plug Wrench

Designed especially for removing and replacing the drain plug on 1939-1947 Fords and Mercurys. Wrench has 2" double hexagon opening, head offset 20°, 10 3/4" long.

### No. 2588 Main Bearing Wrench

For holding main bearing bolts on Ford V8 while cap nuts are adjusted. Has 9/16" double square openings.

## Open End Adjustable Wrenches

Designed to fit either square or hexagon nuts. Drop-forged of alloy steel, fully chrome plated, with polished jaws. Jaws are unusually thin to get into normally inaccessible places. Both handle and jaw are hardened and tempered in oil. They will not break or wear in the gear teeth and allow play in the wrench, permitting the jaw to slip off the nut. Four tempered threads meshing in the forged jaw permit great pressure on the handle. Available as listed.

Furnished in a sectional, size-marked cardboard box.

## PW Series Pipe Wrenches

Patent No. 1,727,623

This superior, Ridgid pipe wrench enables the mechanic to do more work with less effort and reduce his tool replacement costs.

The jaws give quick, positive grip and instant let-go. They will not jam or lock on a pipe. The one-piece construction of the I-beam handle and housing give extra strength and the adjusting nut spins easily.

**BONNEY FORGE & TOOL WORKS, ALLENTOWN, PENNSYLVANIA**

Bonney Screw Drivers are made with solid, forged, one-piece blades, formed with an upset shoulder against which the handles are forced (except electricians' pattern). Each blade is heat treated throughout and is ground and polished. They are firmly anchored in the handles to prevent turning or loosening. The tips are accurately taper ground to insure a non-slip fit in screw slots.

All composition handle screw drivers have exceedingly tough handles that are non-conductors of electricity. The handles are fluted to provide a secure, comfortable grip. Bonney Screw Drivers are durable and practical and are finished in keeping with the high quality of the tool.

## Round Shank Composition Handle

Solid, forged, one-piece blades are forced into handles against the upset shoulder to insure an absolutely tight fit. The blades are heat treated. Handles are of transparent, non-conducting composition. The top portion of the shank on Nos. 08 to 012 is hexagon to allow the use of a wrench for added leverage.

## Round Shank • Wood Handle

This line of quality, wood handle screw drivers will stand up under severe use. Blades are drop-forged from selected alloy steel and carefully heat treated their entire length. Tips are taper-ground.

The hardwood handles are fluted, to provide a firm, comfortable grip and bolsters firmly anchor the blades to the handles.

## No. W05 Screw Driver Set

This assortment contains one each of numbers W03, W04, W06, W08 and W010. It offers a remarkably complete set which meets practically every screw driver need. All of them are made to withstand long, severe use. Balance, which distinguishes all fine tools, is built into every Bonney Screw Driver.

## Adjusting • Composition Handle

A strong, sturdy screw driver for making fine adjustments. The handle is designed to fit comfortably in the hand and to provide a firm grip. It is of transparent, non-conducting composition.

No.	Length of Blade	Width of Tip	Overall Length

S02	1	$\frac{1}{4}$	$2\frac{3}{4}$

Square Shank  
Composition Handle

Blades are forged in one piece, heat treated their full length and firmly anchored in the handles. Handles are non-conductors of electricity. The tip is not merely an extension of two of the square shank surfaces, but is forged and taper-ground.

No.	Length of Blade	Width of Tip	Overall Length

No. EO2 Pocket Size With Neon Tube  
Composition Handle

For "out on the road" jobs, this screw driver is one of the handiest tools in a mechanic's kit. It has a tough, composition handle that is a non-conductor of electricity, with a neon tube for testing spark plugs. The tip is magnetized and a wire guard slides over the tip to protect the pocket. A handy, pocket clip is also supplied. The blade is forged of special screw driver steel, heat treated, with taper-ground tip.

No.	Length of Blade	Width of Tip	Overall Length
EO2	$2\frac{1}{4}$	$\frac{1}{8}$	5

No. EO3 With Neon Tube  
Composition Handle

The neon tube in the tough composition handle of this screw driver makes it a most useful tool for automotive and electrical work. It's made to stand hard usage.

When testing spark plugs, a brilliant, orange flash shows the plug is O.K. Completely shorted produce no flash. A "stringy" flash shows the plug is partly fouled. Replacement tube EO3B is available.

The blade is forged with taper-ground tip and securely anchored in the handle.

## To Fit Phillips Screws Composition Handle Type

These fine quality screw drivers to fit Phillips screws have transparent, amber-colored composition handles that are non-conductors of electricity. Blades are drop-forged and carefully heat treated their entire length. They are securely fastened in the handles to prevent turning or loosening. The four sizes shown will take care of all sizes of Phillips screws. The top portion of the shank on the No. CP4 is hexagon to allow the use of a wrench to gain added leverage.

## Bonney Pliers

### No. B6 - 6", Combination Plier

Sturdily-built, forged, heat treated, and plated slip-joint plier of the most popular type. It is made in a 6" size only. Minimum order, 12 pcs.

### Nos. B17 - 6"; B19 - 7" Diagonal Cutting Pliers

Diagonal head provides hand clearance for close cutting. Strong cutting edge.

### Plier Set No. N9R

Very useful on ignition, starter, generator, carburetor, and general light wiring and instrument work. Contains one each of 3 small 4" pliers in LR12.

- B13 Flat nose plier
- B14 Short chain nose plier
- B16 Diagonal cutting plier

Above pliers can also be purchased singly.

### No. B18 - 6" Heavy Duty Diagonal Cutting Plier

Drop-forged with specially heat treated cutting edges.

### No. B20 - 7", Battery Plier

Jaws are deeply and sharply serrated to insure a strong grip on terminal connections.

## No. B21 - 7 3/4" Lock Ring Pliers

These pliers are designed to remove and install lock rings. Made of alloy steel.

## No. B33 - 7", Spring Manufacturers' and Body Trimmers' Hog Ring Plier

A necessary item in every body shop for spring and upholstery repair work. For large Rings—to Close Right Prong over Left Prong.

## Nos. B22 - 6"; B23 - 8" Linemen's Pliers

Heat treated cutting edges. Jaws serrated for stripping insulation and wire pulling.

## No. B34 - 9", Pump Plier

The patented design of this drop forged plier removes the load or strain from the bolt insuring unusual strength and long life.

## No. B25 - 6" Long Nose Side Cutting Plier

Ideal for close-quarters work in narrow, confined openings.

## No. B35 - 5", Ignition Plier

This ignition plier has unusual strength because of the patented Wellock design. The strain is removed from the bolt and because of the Wellock feature there is no danger of the bolt breaking. Drop forged from quality alloy steel and carefully heat treated. Has polished finish.

## Nos. B24 - 5 1/2"; B26 - 7" Mechanic's Slip Joint Cutting Pliers

High quality all around work pliers for general use in the shop.

## Nos. B36 - 6"; B38 - 8"; B310 - 10" Slip Joint Pliers

These combination slip joint pliers have two positions and their design removes the load or strain from the bolt, insuring unusual strength and long life.

## Nos. B27 - 8"; B28 - 10" Heavy Duty Slip Joint Pliers

Sturdy construction, square-fitting jaw ends assure long, satisfactory service.

## Nos. 1607 - 7"; 1610 - 10" Plier Wrenches

These tools are very fast in adjustment and easy to use. The design of the jaws, with the bottom member a hinged fulcrum, permits a firm solid grip without slippage on irregular shaped objects. The jaws can be made to grip at the ends only, if so desired.

## No. B30 - 8", Wiring Plier, Duck Bill

Square-gripping narrow jaws allow insertion in narrow, confined quarters.

## Ball Pein Hammers

The octogan-shaped heads of Bonney Ball Pein Hammers are drop-forged from special hammer steel, while the handles are made of fine, straight-grained hickory. The handles are dipped to toughen the eye end and are forced into the head and securely locked in position by two steel wedges.

PH5	1 1/2 lb.	13	PH9	1 1/2 lb.	16
PH6	3/4 lb.	14	PH10	2 lb.	16

## Soft Face Hammers

Bonney Soft Face Hammers have tough, amber colored cellulose tips that are replaceable. Handles are of quality hickory, shaped to afford comfortable grip and are wedged securely in the steel center head.

These hammers are especially useful in aircraft work, in body and fender repair work, etc., for shaping and forming light sheet metals, as well as in numerous assembly jobs requiring a hammer that will not mar a finely finished surface or delicate machine parts.

## Nos. PH35 and PH36 Claw Hammers

Because of the demand for a general utility claw hammer, Bonney has added these two most popular hammers to the line. There are so many uses, such as opening cases, etc., that a great many mechanics find a claw hammer a useful tool in their kit.

No. PH35 is made with curved claw, polished head. No. PH36 is made with straight claw, polished head. Each hammer weighs 16 ounces.

## Bonney Punches

Chisels, Punches and similar hand tools are naturally subjected to very severe service. Bonney has spared no effort to meet these conditions and to offer the best in tools of this type. All are forged of the special alloy steel which stands up best in the service to which they are put and are carefully heat treated.

Heads are comparatively soft which reduces chipping and allows them to be readily redressed when battered.

## No. 2680 Brake Spring Plier

Designed especially for the removal and replacement of internal brake springs on cars and trucks of all types and sizes, this brake spring plier will be found unusually efficient.

The hooked end of the plier grasps the brake spring firmly, while the "goose-neck" pointed side of the plier makes firm contact with the brake lining on the shoe and prevents any possibility of slipping.

The plier can be used equally well in the removal of springs held in place by the hole in the brake shoe (Fig. 1), or by a stud attached to the brake shoe (Fig. 2).

In replacing brake springs on brakes that have the stud fastened to the brake shoe (Fig. 3), the notched end of the plier will be found exceptionally useful.

The No. 2680 Brake Spring Plier is drop forged of Bonaloy Steel, carefully heat-treated, with full chromium plated finish. It weighs only 11 ounces. Its 12½" length provides leverage to handle the strongest springs with ease.

No. K50

## No. K50 Brake Adjusting Gauge

A feeler gauge designed expressly for measuring clearance between brake drum and shoe. Blades are made from finest, imported Swedish Steel, carefully heat-treated and tempered to withstand wear. Each blade is tested to insure the exact thickness etched on it.

It is equipped with a knurled thumb nut for instant release and selection of the blade desired. When tightened, it holds the blade selected in working position, while blades not needed are securely locked in the handle.

No. K50 has 9 blades, each 4" long, in the following thickness—.006; .008; .010; .012; .015; .018; .020; .022 and .032.

## No. P011 Convertible Gear Puller

This is the small size in the new line of Bonney Convertible Pullers. The design of these sturdy pullers is such that a quick changeover will convert to a 2-arm or 3-arm puller as desired.

The upper assembly pins, with ball-detent locking, are quickly snapped from the links and are as readily replaced in the desired set-up, overcoming the necessity of using wrenches to disassemble and reassemble as in the case of bolted assemblies. This one model, P011, can be used to replace two separate pullers.

The individual parts are made of carefully selected alloys, treated as required to make this a balanced, strong and handy tool. A shear pin is provided to guard against jaw breakage.

The reversible arms (No. P011-5) in this assembly, have a maximum reach of  $3\frac{1}{2}$  inches in depth and 0 to 6 inches in spread.

For identification, component parts have been assigned the following numbers:

P011-1 . . . Hub	P011-3 . . . Link	P011-5 . . . Arm
P011-2 . . . Screw	P011-4 . . . Pin	( $3\frac{1}{2}$ in. reach)
	P011-6 . . . Shear Pin	

Since all parts are interchangeable, this puller can be converted further into a P011L (below) by securing a set of extra arms, No. P011L-5, as illustrated.

Assembled as  
3-Arm Puller

## No. P011L Convertible Puller

This puller is exactly the same as the above, except for the fact that it is furnished with the longer, adjustable arms No. P011L-5 in place of the shorter arms.

These longer arms have a maximum reach of  $5\frac{1}{2}$  inches in depth and 0 to 8 inches in spread. No. P011L is provided for those cases in which the longer arms are required at the time of the original purchase of the puller. It can also be adapted later by securing the extra arms No. P011L-5, used in the P011 assembly above.

Parts are identified by the following numbers:

P011-1 . . . Hub	P011-3 . . . Link	P011L-5 . . . Arm
P011-2 . . . Screw	P011-4 . . . Pin	( $5\frac{1}{2}$ in. reach)
	P011-6 . . . Shear Pin	

Assembled as  
2-Arm Puller

No. P011L  
Assembly,  
No. P011L-5

## No. PO12 Convertible Gear Puller

Assembled as  
3-Arm Puller

The P012 is a rugged puller, designed to handle the majority of pulling operations encountered in the automotive service shop.

This puller is made in the same general design as the smaller P011, converting to a 2-arm or 3-arm assembly to meet the requirements of the job. It features the ball-detent locking pin linkage for quick changeover. A shear pin protects jaws.

Another feature of this puller is the slotted jaw on one end of the reversible arms, to be used for pulling gears which necessitate the use of cap screws in their removal. This feature adds greatly to the versatility of the tool. The reversible arms (No. P012-5) in this assembly, have a maximum reach of  $5\frac{1}{2}$  inches in depth and 0 to 8 inches in spread.

Parts are identified by the following numbers:

P012-1... Hub	P012-3... Link	P012-5... Arm
P012-2... Screw	P012-4... Pin	( $5\frac{1}{2}$ in. reach)
	P011-6... Shear Pin	

Parts are interchangeable with No. P012L (below) so that this puller may be further converted by securing a set of extra arms, No. P012L-5, as illustrated.

## No. PO12L Convertible Puller

This puller is exactly the same as the above, except for the fact that it is furnished with the longer, adjustable arms No. P012L-5 in place of the shorter arms.

These longer arms have a maximum reach of  $8\frac{1}{2}$  inches in depth and 0 to 10 inches in spread.

No. P012-L is provided for those cases in which the longer arms are required at the time of the original purchase of the puller. It can also be adapted later by securing the extra arms No. P012-5, used in the P012 assembly above.

Parts are identified by the following numbers:

P012-1... Hub	P012-3... Link	P012L-5... Arm
P012-2... Screw	P012-4... Pin	( $8\frac{1}{2}$ in. reach)
	P011-6... Shear Pin	

Arms for No. PO12L Assembly, No. PO12L-5

## Adaptors for Convertible Gear Pullers

The four adaptors illustrated at right are for use with Bonney Convertible type pullers and are used to protect the shaft ends. The two sizes with knurled faces are for shafts which are not counter-sunk to receive the centering point on the puller screw.

- No. P280.....knurled,  $1\frac{5}{32}$ " diam.
- No. P285.....knurled,  $1\frac{5}{16}$ " diam.
- No. P290..... $1\frac{5}{32}$ " diam.
- No. P295..... $1\frac{5}{16}$ " diam.

## No. P309 Timing Gear Puller

This is a general purpose puller for removing timing gears, fan assemblies, vibration dampeners and other parts which are tapped to receive cap screws  $\frac{3}{8}$  inch in diameter or less.

This puller is especially useful for pulling Chevrolet vibration dampeners without removing the radiator.

Parts for the No. P309 Puller are identified as follows:

- P309-1 Center Block,  $5\frac{1}{2}$ " long.
- P309-2 Forcing Screw,  $11\frac{1}{2}$ " long.
- P309-3 Cap Screws (2),  $\frac{3}{8}$ "—16 thd. per inch,  $3\frac{1}{2}$ " long.

## No. P319 Pitman Arm Separator

This tool is a forked wedge type separator, used to dismount the pitman arm assembly. The wedge is inserted between the pitman arm and the shaft. The arm is loosened by striking the end of the tool.

Separator No. P319 has a jaw opening  $1\frac{1}{8}$  inches wide. The length of the tool is  $11\frac{1}{4}$  inches.

## "Knock-Off" Wheel Pullers

These "knock-off" wheel pullers are inexpensive tools that will be found useful on practically all makes of cars and trucks. They are made of special analysis steel, accurately machined and heat-treated, but due to the service to which they are put, they are not guaranteed.

No. and Size	No. and Size
P420 $\frac{5}{8}$ —18 thd./in.	P428 $\frac{7}{8}$ —14 thd./in.
P424 $\frac{3}{4}$ —16 thd./in.	P432 1—14 thd./in.

No. P317 Shock Link & Stabilizer Link Separator

This tool is a forked wedge type separator, used to free the tapered links of the shock absorber assembly or the stabilizer assembly from their mountings.

The wedge is inserted between the link and the arm of the assembly and loosened by striking the end of the tool.

Separator No. P317 has a jaw opening  $\frac{5}{8}$  inches wide. The length of the tool is 16 inches.

No. P305 Two-Arm Gear Puller

This two-arm puller has a wide range of applications in the service shop.

It is especially useful to the refrigeration service man for pulling operations encountered in refrigeration maintenance.

This tool will also service a great number of applications found in the automotive and aircraft service industries.

The unique feature of this puller is the simplicity of construction. Parts are identified as follows:

- P305-1 . . . Outer Arm
- P305-2 . . . Inner Arm
- P305-3 . . . Forcing Screw
- P305-5 . . . Pivot Pin

Maximum reach is  $2\frac{3}{8}$  inches in depth.

Maximum spread is  $3\frac{1}{2}$  inches.

Plastic Drifts

These Plastic Drifts are very useful tools for work where it is desired to avoid marking or damaging finished parts. They are also useful for driving out grease retainers and bearings.

Bonney Plastic Drifts are made of a tough plastic material that stands up extremely well under severe pounding.

Gear & Misc. Pullers  
Sec. 11

Feeler Gauges, made from the finest, imported Swedish Steel, carefully heat-treated and tempered to withstand wear. Each blade is tested to insure the exact thickness which is etched on it.

Bonney Feeler Gauges are equipped with a knurled thumb nut for instant release and selection of the blade desired. When tightened, this thumb nut securely holds the blade selected in working position, while blades not needed are securely locked in the handle.

## No. K50 Brake Adjusting Gauge

For measuring clearance between brake drum and shoe. 9 blades 4" long in the following thicknesses—.006; .008; .010; .012; .015; .018; .020; .022 and .032.

## No. K51 General Purpose Gauge

Especially for tappet and ignition work—the most popular gauge on the market. 10 blades 1 $\frac{5}{8}$ " long, 10 blades 3 $\frac{3}{16}$ " long and 3" point file. Short blades in following thicknesses—.012; .013; .014; .018; .020; .022; .024; .025; .028; .032. Long blades in following thicknesses—.002; .003; .004; .005; .006; .007; .008; .010; .013; .015.

## No. K52 Ignition Gauge

Contains 10 narrow blades 1 $\frac{5}{8}$ " long and 3" point file for ignition, distributor points and spark plugs. Thickness of blades included as follows—.012; .013; .014; .018; .020; .022; .025; .028; .032 and .035.

## No. K53 Universal Master Gauge

Has full range of spacers—25 blades, each 3 $\frac{3}{16}$ " long in following thicknesses—.0015; .002; .003; .004; .005; .006; .007; .008; .009; .010; .011; .012; .013; .014; .015; .016; .018; .020; .022; .024; .025; .028; .030; .032 and .035.

## No. K54 Standard Feeler Gauge

Contains 10 blades 3 $\frac{3}{16}$ " long in following sizes—.002; .003; .004; .005; .006; .007; .008; .010; .012 and .015.

## No. K55 Extra Long Feeler Gauge

Exceptionally useful for pistons, etc. Has 8 blades, each 8 $\frac{5}{8}$ " long in the following sizes—.002; .003; .004; .005; .006; .008; .010; .015.

## No. K56 Single End Feeler Gauge Stock Holder (Positive Adjustable Lock)

Any thickness of feeler gauge stock coils within the handle and can readily be pulled out for use. Any desired length of strip stock or standard 12" blades may be used. Positive sliding lock securely holds blades. Made from hard drawn, cold rolled steel and satin nickel plated. Length 4 $\frac{1}{2}$ ". Weight 1 oz.

## Extra Blades

Designed to fit practically any holder, the 3 $\frac{3}{16}$ " blades are available in all the popular range of thicknesses and with hole for insertion in gauges. The 12" lengths are popular for use in the No. K56 Stock Holder which makes the blades usable to the end. Both 3 $\frac{3}{16}$ " and 12" blades are packed 6 in a cellophane envelope. Sizes are listed below.

## No. 197 Putty Knife

A handy shop tool for removing gaskets, grease, etc. Flexible steel blade and ferruled oval handle.

## No. CSI Carbon Scraper

This tool is made of tempered spring steel which provides the best combination of flexibility and wear-resistance. Its flexibility aids greatly in speeding up carbon-scraping jobs. The scraper blade is 1" wide.

## No. RC46 Piston Ring Groove Cleaner

Cut hands and knuckles eliminated. Can be used on pistons up to 6 inches. No turning or tilting. Uniform working tension. Non-gouging and non-chattering action. Will not jump or climb out of ring groove. Can be used as groove deepening tool. Positive cutter lock. Cutter easily removed for resharpening. Replacement blades available. Four-way cutter blade— $\frac{3}{32}$ ",  $\frac{1}{8}$ ",  $\frac{5}{32}$ ",  $\frac{3}{16}$ ".

Patent No. 2,124,757

## Handy Holding Tools

Ideal for screw holding, gripping, inserting, removing and picking up screws, washers, nuts, bolts, taper pins, valve pins and similar objects. The two spring steel fingers are forced outward and open. When pressure is released the strong coil spring closes the fingers tightly around the object.

Used by electricians, radio service men, locksmiths, piano tuners, and in servicing typewriters, adding, calculating, linotype and similar machines, as well as by automotive mechanics. Finished in full nickel.

## Magnetic Holding Tools

Tool No.	Length
K1	9"
K2	27" extended

These extremely useful tools have a powerful magnet in the hinged end. They are designed for extracting metal objects from tight places and work equally well on screws, washers, nuts, bolts, taper pins, valve pins, etc. The larger tool (K2) has a telescope type extension handle.

## Thread Restorers

Used like a file, these Thread Restorers are fast cutting and do a quick job in restoring battered or damaged threads on studs, bolts, capscrews, axle shafts, etc. They are made in two sizes.

TR1—for 11, 12, 13, 14, 16, 18, 20, 24 threads to the inch.

TR2—for 9, 10, 12, 16, 20, 27, 28, 32 threads to the inch.

## No. TR7 Thread Restorer Set

Furnished as a set only, the eight sizes of restorers are used to re-chase battered or damaged threads so that nut will run on freely. Not to be used as dies on new work.

## Engineers' Wrench Sets

### No. W25 Set

The No. W25 Bonney Engineers' Wrench Set will cover all the most popular sizes of Whitworth Nuts and Bolts. Every wrench has a different size opening in each end. They are drop-forged of Bonaloy Steel, are light in weight and have pear shaped heads to easily gain access to the "hard-to-get-at" places. It contains one each of the following wrenches—

Nos. W1023      Nos. W1027      Nos. W1031  
W1025      W1029      W1033

W25R is furnished in leatherette roll, LR56, W25 in cardboard box.

### No. M25 Set

Exactly the same as the No. W25 Set except that the wrenches included have metric measure openings. One each of the following wrenches are included—

**Diesel Locomotive Set**  
**No. DSL3B & DSL3 • Electrician**

This Diesel Locomotive Electrician's set contains fifty-one essential tools for this specialized service work. Wrenches and sockets are Bonaloy special alloy steel, chromium plated. The set includes the new and popular 4080 half-inch drive planetary ratchet. Set DSL3B is furnished in metal box MB60, 20 1/2" x 8" x 5". DSL3 in cardboard box.

## Power Sockets

### Single Hexagon • Regular Length

Bonney Industrial Power Sockets are made to "stand the gaff" under the rugged service to which they are subjected. These sockets are attached and retained by means of a pin and band assembly. Bands and retainer pins are listed on page 7 of this section.

## Power Sockets

### Single Hexagon • Bolt Clearance Length

Made to fill the "all-purpose" requirements of general industrial service where bolts may run longer than normal depth of the nut. Pins and bands for attaching these sockets are listed on page 7 of this section.

## Neoprene Bands & Retainer Pins

Packed 24 to a package

The pin-holding bands listed below are of a special neoprene composition, assuring a longer life of resiliency because of their greater resistance to grease and oil.

Retainer pins are accurately sized for each application.

## Bonney Heavy Duty Box Wrenches

Bonney Heavy Duty Box Wrenches with double hexagon openings are designed for breaking loose or tightening large diameter nuts with a minimum of effort. They will be found especially useful for work on trucks, buses, tractors, steam shovels, industrial machinery, road machinery, etc.

Drop-forged of chrome-alloy steel, they are carefully heat treated to insure the ultimate strength of the steel, and are heavily plated. All have highly polished heads. A positive locking device holds the wrenches firmly in the interchangeable handle designed to give extra leverage for turning the "toughest" nut.

## Bonney Drop-Forged Lathe Dogs

with Bent Tail

Bonney Drop-Forged Lathe Dogs are supplied in two styles—with safety screw or with square head screw. All screws are threaded U. S. Standard, except those above 1 inch diameter which have eight threads to the inch. Screws are of special steel, hardened and tempered.

By drilling and tapping for the different diameters, the Dogs may be furnished with either Safety or Square Head Screws, but the two types of Screws are not interchangeable and the safety feature is eliminated if the Square Head Screw is used. Unless otherwise specified, Dogs with Safety Screws will be supplied.

## Bonney "C" Clamps • Body Builders' Type

Bonney Body Builders "C" Clamps are designed especially for woodworkers, body-builders and similar trades where the clearance provided by a deep throat is necessary. Drop-forged from special steel, heat-treated for maximum strength, they combine a deep throat of ample size with dependable strength at minimum weight.

Screws are drop-forged in one-piece, with no handle or wings to loosen. The handle provides a firm, solid lever. They are threaded specially for strength and rapid adjustment. Swivels are provided on all sizes.

## Bonney "C" Clamps

### Heavy Duty Type

These clamps are drop-forged from a strong, tough grade of selected steel. Special heat-treatment is given to them to increase their stiffness and strength and reduce the possibility of springing.

The screws, with U.S. Standard thread, are made of special steel, hardened and tempered.

Unless otherwise specified Standard length screws as listed will be furnished. If required, full length screws will be furnished at extra cost.

### Medium Service Type

The Medium Service Clamps are designed to provide the service as indicated by the name—between Light Service and Heavy Duty. They are drop-forged from a special grade of strong, tough steel and are heat-treated.

The screws are made of special steel, hardened and tempered. They have U.S. Standard Thread and Adjustable handle. Swivels are drop-forged.
